SANDSCAPE TEXTURE

Imagine

Colorful. Versatile. Durable

Bomanite SandScape[®] Texture is a highly durable and cost effective architectural concrete finishing option that utilizes specialized concrete mix designs containing select sands and aggregates. Installed by Bomanite Licensed concrete craftsmen, Bomanite SandScape Texture is the product of choice for projects requiring a decorative and durable finish alternative to traditional concrete paving. Natural, regionally selected and qualified sands such as granite, quartz or limestone are the common aggregates of choice for Bomanite SandScape Texture installations. Light fast Bomanite colorants and additional decorative mineral aggregates are incorporated into the concrete mix or to the surface of the freshly placed slab with the finished product resembling fine “quarried stone”. The natural non-skid properties and abrasion resistant aggregates make Bomanite SandScape Texture the perfect choice for all residential and commercial exterior concrete applications including entries, municipal or public works projects, hospitals, educational facilities, museums, pool decks, plazas and more.

SANDSCAPE TEXTURE

REALIZE The Possibilities.

Comprehensive Sustainable System

Bomanite SandScape Texture is both products and process; a series of systems comprised of pre-qualified local aggregates, light fast pigments and architectural aggregates along with surface applied treatments to harden and densify the surface, resulting in surface durability far superior to conventional broom finished concrete. Designed for outdoor applications, Bomanite SandScape Texture is a robust, sustainable option where low-maintenance, slip resistance and a decorative concrete surface is desired.

Creative Design and Color Options

Once exposed and cured, Bomanite SandScape Texture is ideally treated with Bomanite Con-Shield, a hydrolyzed lithium silicate densifier designed to improve the properties of the concrete at the surface. A further treatment with one of Bomanite's stain resistant film forming or penetrating sealers is utilized depending on type of exposed aggregates. Additional coloration

with Bomanite Chemical Stain or Bomanite Con-Color prior to final sealing is possible if a variegated look or secondary colors are desired.

Environmentally Conscious Application

The sustainable properties of Bomanite SandScape Texture make it an excellent choice for environmentally conscious applications. Bomanite SandScape Texture mix designs readily accept fly ash or slag or other supplementary cementitious materials, offsetting a portion of the ordinary portland cement. Urban heat island effect can be greatly reduced by thoughtfully designed installations. Third party independent testing has shown that Bomanite SandScape Texture can exceed .29 solar reflectance without the use of white cement, allowing for the concrete to be cooler underfoot making it ideal for large urban plazas and pool deck applications. Most importantly the exposure of the fine aggregates result in a robust concrete that has an excellent life cycle with reduced maintenance requirements. This allows the design professional to utilize with confidence Bomanite SandScape Texture for critical projects or substitute for more traditional large dimension natural stone installations.

Installed By The Best

Bomanite SandScape Texture is installed utilizing carefully crafted Bomanite application procedures by trained and licensed applicators that specialize in architectural concrete installations. Consult with your local Bomanite Exposed Aggregate Licensed Contractor for color charts, standard and custom samples, additional color and aggregate combinations or feel free to contact Bomanite to discuss your project needs.
